

Azure DevOps Build Stage Explanation

Stage: Build

- Creates a pipeline stage named Build.
- Stages are major phases in Azure DevOps pipelines.

displayName: Build WAR

- Friendly name displayed in Azure DevOps UI.

jobs:

- A stage contains one or more jobs.

job: MavenBuild

- Defines a job named MavenBuild.

displayName: Compile and Package

- Friendly display name for the job.

steps:

- Steps are sequential actions executed inside the job.

task: Maven@3

- Uses Azure DevOps built-in Maven task version 3.

displayName: Maven Clean Package

- Friendly task name shown in logs.

inputs:

- Configuration settings for the Maven task.

mavenPomFile: pom.xml

- Specifies the Maven project file.

goals: clean package -Dmaven.test.skip=true

- Runs Maven clean and package commands.
- clean removes old build files.
- package compiles and creates WAR file.
- -Dmaven.test.skip=true skips tests.

publishJUnitResults: true

- Publishes JUnit test results to Azure DevOps.

testResultsFiles: '**/surefire-reports/*.xml'

- Location of JUnit XML test reports.

javaHomeOption: JDKVersion

- Uses pre-installed JDK from build agent.

jdkVersionOption: '1.11'

- Uses Java 11.

task: PublishPipelineArtifact@1

- Publishes the WAR file as a pipeline artifact.

displayName: Publish WAR Artifact

- Friendly task name.

targetPath: \$(warFile)

- Specifies the WAR file path to publish.

artifact: \$(artifactName)

- Defines the artifact name used by later stages.

End Result:

- Maven builds target/myshuttledev.war

- Artifact is stored in Azure DevOps

- DEV/TEST/UAT/PROD stages can download and deploy it.
